

## Application which demonstrates the concept of Selection

In case of typescript we can achieve selection using

1. if else construct
2. switch case

Below application demonstrates concept of if else construct.

```
console.log("Marvellous Infosystems : if else construct");
```

```
function ChkEvenOdd(num:number)
```

```
{  
    if (num % 2 == 0)  
    {  
        console.log("Even");  
    }  
    else  
    {  
        console.log("Odd");  
    }  
}
```

```
var no = 12;
```

```
ChkEvenOdd(no);
```
